

Accessing Safari eBooks

Authentication to Safari eBooks is based on a user token passed to Safari from the Library's log-in page. There is a possibility that the browser session cookies can block the passing/storing of this token and cause access issues.

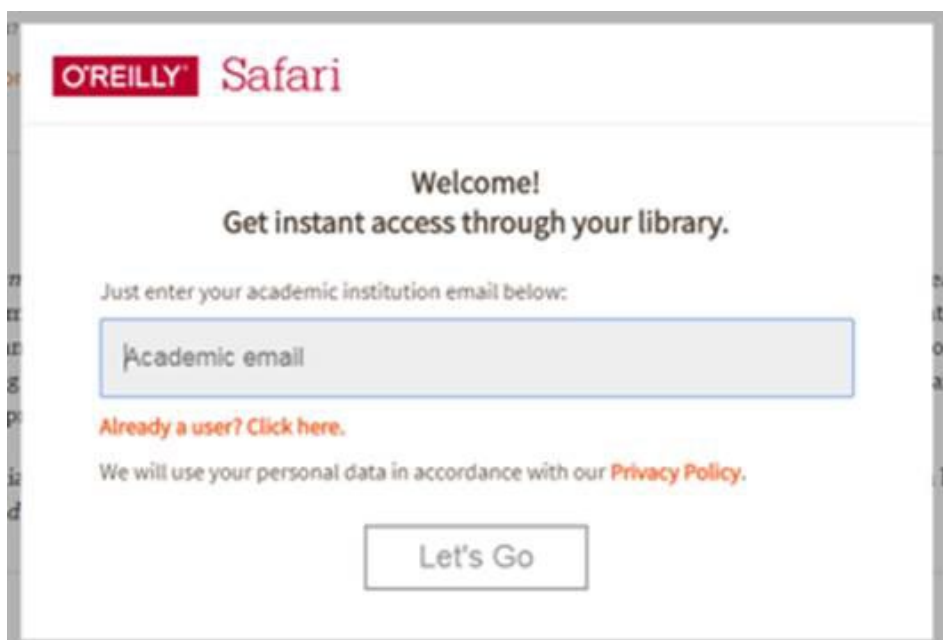

How to tell your log-in worked

This is the welcome screen when the token is present and you have full access to an eBook and/or the Safari platform.

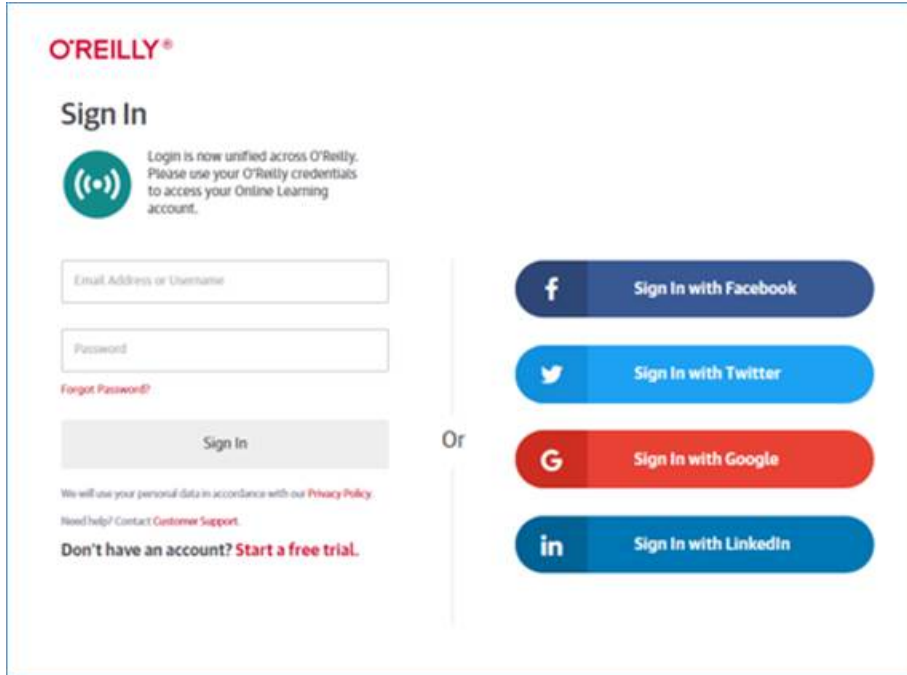

How to tell your log-in didn't work

The "academic email" screen means the token was blocked and you will not be able to access the eBook and/or the Safari platform.

Please Note: Do not use the academic email login option as it creates a dummy account for you which can impact your future access.

Any other sign-in screen means the user token was blocked.

What is the work-around?

From the Library's website

- Go to https://library.humber.ca/atoz_landing/S.
- Right click and open the **Safari Learning Platform** link in an incognito/private window and search for eBooks.
- This lets you log-in to Safari without the browser cookie blocking the token.

From the Discover search results page

- Right click and open the **View Online** eBook link in an incognito/private window.
- If you don't see the welcome screen after logging in then use the "email this item" and access the title that way
- You can also access the eBook directly from the Library website as noted above.

From Blackboard

- Right click and open the eBook link in an incognito/private window.
- This allows you to log-in to Safari without the browser cookie blocking the token.

Mobile App

Create a separate account to use the mobile app. Details found in the Library's [O'Reilly app page](#).
